CO3 - AT3

1{. A{ The regression line always passes through the mean of x

2{. C{ Decision trees can be used for classification and regression.

3. C{ Both (a) and (b) - pre pruning and post-pruning.

4. A{ prone to over fitting.

5. B{ updating probability based on new evidence

6. B{ probability of event A given event B has occured

7. D{ 0.75

8. C{ Total number of possible outcomes.

9. A{ 0.16

10. B{ conditional probability.

11. A{ The probability of H increases

12. B{ 4/11

13. B{ machine learning.

14. B{ It updates weights using the gradient of the loss function.

15. B{ The model may overshoot the optimal weight values and fail to converge.

16. D} Both (a) and (b)

17. A} Decision tree

18. A} The Model may suffer from overfitting.

19. A} pruning redundant or less significant rules.

20. A} visualize classification performance by showing correct and incorrect predictions.

21. C} accuracy.

22. B} positive instances correctly classified as positive.

23. A} precision = TP/(TP+ FP)

24. B} F1-score.

25. B} The Model has a low number of false negatives

26. A} Decision tree

27. A} The Model may suffer from overfitting.

28. A} pruning redundant or less significant rules.

29. A} visualize classifier performance by showing correct and incorrect predictions.

30. C} Accuracy.
